

Broadway Avenue Bridge Replacement

Greenbelt Improvements

The Idaho Transportation Department (ITD) is replacing the Broadway Avenue Bridge over the Boise River. The project includes enhancing connectivity to the Greenbelt at all four corners of the bridge. The planned improvements will allow bicyclists and pedestrians to access the Greenbelt from Broadway Avenue safely and easily.

Southwest (BSU)

Preliminary design plans include adding a paved ramp at the southwest corner to connect the Greenbelt to Broadway Avenue.

Southeast (University Plaza/Chili's)

At the southeast corner, plans include adding both a ramp and stairs from the pathway to the roadway. A boat ramp is planned to be built at the southeast corner for Boise Fire and Rescue use only.

GREENBELT IMPROVEMENTS

Preliminary design plans include stairs and ramps at both the northwest and northeast corners of the bridge.

Northwest (Julia Davis Park)

Northeast (Ram)

Preliminary design plans for the Greenbelt under the bridge include an open view of the river from the pathway on both sides of the river. The pathway under the bridge will be raised to help reduce flooding in the spring.
